

CASE STUDY

RESTORING A 5.0 LITRE TRUCK ENGINE WHICH HAS CHUGGING AND LUG ISSUES WITH ARCHOIL® AR2300

BACKGROUND:

To restore hesitation issues on a 5.0L Truck for restoration.

PRODUCTS USED:

Archoil AR2300 was added to the engine oil at the recommended dosage rate.

RESULTS / CUSTOMER COMMENTS:

“There is approximately 190k miles on the original 5.0 engine. I’m happy to report that it has never run smoother. I bought this truck to restore, but haven’t sent it off to paint yet. It used to chug/lug really badly, with a little 2300 in the oil and man... what a difference!”

“I’ve got your AR6200 on order as per our phone call last week. Looking forward to talking to you again on Monday / Tuesday of next week to get reviews up and running on your page so I can leave a review for you. I’m about to put some in my micro car next:

Let me know what time works for you, can’t wait to speak again.”
